Connect these apps

The screenshot shows the Zapier interface for creating a new automation. The main workspace has a grid background. On the left, a '1. Select the event' box for GitHub is shown, with a dropdown menu open displaying 'new issue' and 'New Issue' (with a 'Polling' option). Below it, a '2. Select the event' box for Slack is visible. On the right, a sidebar panel titled '1. Select the event' is open, showing the 'App' as GitHub, the 'Trigger event' as 'Choose an event', and the 'Account' as 'Select an account'. A red arrow points from the 'new issue' option in the dropdown to the 'Choose an event' dropdown in the sidebar. Another red arrow points from the 'Connect these apps' button in the top section to the 'Choose an event' dropdown. At the bottom of the sidebar, there is a button that says 'To continue, choose an event'.

The image shows a Zapier workflow editor. The first step is a trigger labeled "1. New Issue" with a GitHub icon and a "2 min" icon. The second step is an action labeled "2. Select the event" with a Slack icon. A red arrow points to the "2. Select the event" step. On the right, a sidebar for the "1. New Issue" trigger shows a "Test your trigger" section with a "chichimontanocm-hash" account and a "Test trigger" button.

The image shows the configuration for the "2. Select the event" Slack action. A red arrow points to the "Standard actions" tab, which lists "send channel message", "Send Channel Message", "Send Private Channel Message", and "Edit Message". Another red arrow points to the "Choose an event" dropdown menu. The sidebar on the right shows the "App" as "Slack" and the "Account" as "chichimontanocm-hash". A "Test trigger" button is at the bottom.
